**Well Manager customers
on the impact of a Well
Manager system . . .**

"The main difference with the Well Manager is water pressure. We get more pressure with longer use of water from many outlets."

"Under heavy demand the well would run dry. The recharge rate is 1/2 gpm. The Well Manager provides all the water that we need daily and always has lots of extra water on hand."

"We couldn't run the dishwasher and the washer at the same time! Now we can shower, wash clothes, run the dishwasher and have plenty of water! We even installed a sprinkler system for our lawn. This has been possible only with the Well Manager."

"I purchased my Well Manager in June 2017. I worked with Dan, Lynn, and JoAnn, and they were absolutely professional in every way. I installed the unit myself in approximately 1 day. The instructions were very clear. The questions I did have were quickly answered.

The system has been a life saver and has met every expectation. We are no longer counting the number of showers or flushed toilets or planning when we can do wash.

***I would highly recommend the Company and the System.
It saved us from having to drill a new well."***

INNOVATIVE SOLUTIONS FOR WATER SUPPLY PROBLEMS

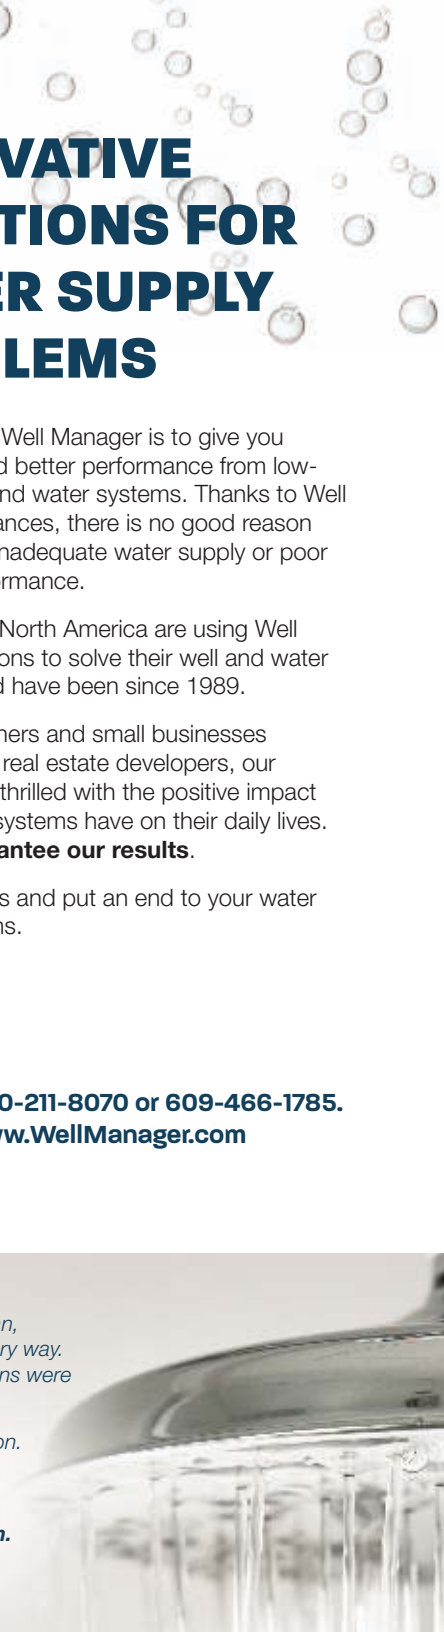

Our mission at Well Manager is to give you more water and better performance from low-yielding wells and water systems. Thanks to Well Manager appliances, there is no good reason to live with an inadequate water supply or poor plumbing performance.

People across North America are using Well Manager solutions to solve their well and water problems—and have been since 1989.

From homeowners and small businesses to farmers and real estate developers, our customers are thrilled with the positive impact Well Manager systems have on their daily lives. **And, we guarantee our results.**

Reach out to us and put an end to your water supply problems.

WELL MANAGER® AND WELL WATCHER

The Well Manager System

Our Well Manager System is *the* solution for low-yield and low-pressure wells. Even if your well yields as little as one quarter of a gallon per minute, Well Manager can help you.

Key Features

Delivers more water from a producing well than any other off-the-shelf product on the market

Takes as little as 3 hours to install and requires no digging or changes to the well

Available in sizes that fit a floor space as small as 24"x37". Will fit through a 24" door

Protects wells from damage caused by over pumping

Protects pumping equipment from dry running

Drought tolerant. Can function with a very shallow water reservoir

Unique flow detector design

Dependable and fully automatic. Requires minimal upkeep

A UL-listed pump control panel that can relentlessly collect a predetermined amount of water at regular time intervals, enabling you to collect the entire output of a well without pumping it down

The Well Watcher System

The Well Watcher is a budget-minded solution for low-yielding wells and inconsistent water pressure. Like the Well Manager, it is designed to protect your well and keep as much water as possible in the ground.

Key Features

Allows you to manage and monitor your water usage

Stores additional water for use in case of emergencies

Delivers consistent water pressure of 60 psi up to 4 gallons per minute and up to 10 gallons per minute at 50 psi

Monitors the well pump and shuts down automatically in the event of a dry run, preventing damage to your pump

Takes up less space than a large freezer chest

HERCULEAN CONSTABOOST™

ConstaBoost for Repressurization

Due to increasing demand for improved water quality in homes, hospitals, and businesses, many people are turning to large reverse osmosis (RO) systems. As a result, water pressure can suffer. ConstaBoost for Repressurization is the way to restore water pressure following water conditioning. The ConstaBoost for Repressurization can solve problems caused by undersized or intermittent water service or complicated water treatment equipment.

Key Features

Restores plumbing performance lost to undersized or elaborate water treatment

Delivers consistent pressure

Fully automatic, ready-to-run system

Electric fill shut-off with meter to set fill rate

Low-water cutoff protects pressure pump

Provides retention time for water treatment

Serves as emergency water storage

Built for corrosion resistance

ConstaBoost for Rainwater Collection/Emergency Water Storage

Unlike any other water storage technology, our versatile system provides a tank and a 10-gallon-per-minute, 40-psi pressure pump.

Key Features

4-inch collection port used for rainwater collecting or manual filling

Hose connection for pressure pump

Translucent tank so water level can be viewed

210 gallons of stored water provides up to 50 days of emergency water for 2 adults

Portable water storage

Useful for support of irrigation

Water can be dispensed by pressure pump or by the manual drain

Can be customized—call us!

GUARANTEED RESULTS FOR BETTER WATER VOLUME AND PRESSURE

Are there times when you need water and don't have it?

Is your water pressure low?

Is adequate water an ongoing concern?

Whether your water comes from a well or a municipal system, you'll find the solution you need at Well Manager.

Well Manager is an environmentally responsible solution that preserves and protects our aquifers and natural resources.
